

# How to Build a Nature Boat!

*So much life*

1

Grab a bucket or bag and let's go on a hike for some nature materials. This could be sticks, leaves, bark, grasses, or anything you want to use for your boat!

Remember to use natural material so we are not adding more garbage to the environment and also only take a few living items!

2

Now, take some time to construct your boat. This is the time to make it your own! Add a sail or a special flower to make it yours!

You might have to get creative since we are using only nature items. Try using grasses to tie items together!

3

Time to set sail! Head to Lake Michigan, the Milwaukee River, or any Urban Ecology Center and test out your boat to see if it floats. You could even have a race!

Remember to be careful around water, grab an adult to come with you!
